

Water loss remains a world problem as approximately 346 billion liters of water are lost from networks every single day. By reducing this by only 30%, 800 million people could be supplied with treated water

Why is this necessary? •

- 2.7 billion water scarce at least one month of the year

- 700 million people suffer today from water scarcity

- 1/4 of the world's population face economic water shortage

# About Our Initiative

Rink Redemption is a water conservation initiative designed by high school senior and Captain/Goalie, Aubrey Organ, to reduce water usage in homes and at rinks by providing environmental education and tools to raise awareness. She created a PLEDGE for players, teams, rinks, and community members to take during the months of March-World Water Day or April-Earth Day/Month to reduce water usage at home/school/rinks, as well as hosting events. Aubrey hopes to raise funds to put back into the hockey community to establish more rinks like the Climate Pledge Arena that target sustainability as well as develop stewards of the Earth.

# Rink Redemption

Help Save our Planet and the Hockey Community!

# Who are we working with?

# SO WHAT IS The Pledge?

We created a pledge that focuses on saving this resource not only to help the sport, but to help the planet. As time goes on, less water is available to daily use, providing even less to extracurriculars. By finding efficient ways to live and run these activities, people are still able to do what they love with a limited cost on the environment.

“Be the change you want to see in the world.”  
- Mahatma Gandhi

## RINK REDEMPTION PLEDGE

Through my participation in the "Rink Redemption" Pledge, I agree to work towards reducing the amounts of water waste at home, at rinks, etc. I will spread my knowledge on the environment and hopefully get more people to support the cause. With my help and the help of other, this pledge will help to save the planet. I want to join "Rink Redemption" and to protect important resources!

### We pledge to reduce our water waste by:

- Taking shorter showers
- Checking faucets and pipes for leaks
- Turning off the water while brushing our teeth
- Watering the lawn only when it needs it
- Using the dishwasher for full loads only
- Using the water saved to drink for later.
- Using the washing machine only for full loads only
- Using buckets instead of a hose to wash a car.
